

Mahdi Hosseini *Back-End Developer*

hosseinismm@yahoo.com • +98 9021187142 • Tehran, Iran • <https://github.com/xBouncyBearx>

Profile

Backend Developer with experience in building scalable backend systems, RESTful services, and distributed applications. Interested in backend architecture, system design, performance optimization, and maintainable software engineering practices. Experienced in collaborating on production systems, microservices, and real-world application development

Professional Experience

10/2025 – 02/2026 Tehran, Iran	Back-End Developer <i>Adlaw</i> - Delivered new backend features including payment gateway integration, admin panel, and dedicated support panel development. - Diagnosed and fixed production issues affecting ticket submission and user registration flows. - Contributed to feature enhancement, maintenance, and stability improvements of an existing application.
09/2024 – 09/2025 Tehran, Iran	Back-End Developer <i>Iran Sign</i> - Developed and maintained backend services for production systems with focus on scalability and maintainability. - Contributed to designing service communication and backend architecture for modular applications. - Implemented business logic, API workflows, and backend features supporting internal and customer-facing services.
06/2024 – 09/2024 Tehran, Iran	Back-End Intern <i>Pouya Cloud</i> - Contributed to backend development of web applications and chatbot-related services. - Implemented APIs and backend logic for scalable application workflows. - Collaborated with team members on feature development, debugging, and deployment tasks.
Tehran, Iran	Technical support <i>ACPC and GameCraft events of AmirKabir university of technology</i> - Supported technical operations for university-scale events. - Diagnosed and resolved infrastructure, networking, and backend service issues under time-sensitive conditions. - Assisted in maintaining operational stability of event systems and related services.

Education

09/2023 – Present Tehran, Iran	Bachelor of Computer Engineering <i>AmirKabir university of technology</i> 
09/2020 – 09/2023 Tehran, Iran	Diploma in Mathematics and Physics <i>National Organization for Development of Exceptional Talents (SAMPAD) Helli 4</i> 

Skills

Tech

PHP/ Laravel | Java/ Spring/ Spring Boot | Rest-API/ GraphQL | Redis | MongoDB | MySQL/ PostgreSQL/ OracleDB | Git/ GitLab | Nginx | Docker/ Docker Compose

Soft skills

OOP | SOLID Principles | Design Patterns | Clean Code | Team collaboration | Quick learner | Problem-solving mindset

Architecture

Microservices | SOA | Event Driven Architecture | Layered Architecture | Service Respository pattern | MVC

Other Languages

Python/ Django | C/C++ | Verilog/ VHDL

Projects

Bank [🔗](#)

Backend banking application supporting account management and transaction workflows.

- Implemented secure authentication and account management functionality.
- Designed transaction handling and core banking operations logic.
- Structured and containerized the application for easier deployment and environment consistency.

Tech: Java, JWT Authentication, Oracle Database, Docker

Lind-A [🔗](#)

Social networking platform inspired by professional networking applications like LinkedIn

- Developed features for user interaction, profile management, and social platform workflows.
- Designed backend logic and data persistence for application operations.
- Built as a university team project with focus on software design and application structure.

Tech: Java, PostgreSQL, JavaFX

Language training app (chat and partner recommendation service) [🔗](#)

Backend service for language learners supporting messaging and user matching capabilities.

- Developed chat and partner recommendation workflows for user interaction.
- Contributed to backend feature implementation and collaborative team development.
- Participated in deployment and operational setup of the application environment.

Tech: Django, PostgreSQL, Redis, React, Docker

Quiz of Kings [🔗](#)

Terminal-based multiplayer quiz application inspired by competitive trivia games.

- Implemented gameplay logic and backend operations for quiz management.
- Built database interaction layer using direct query handling.
- Focused on performance, database operations, and backend application logic.

Tech: Java Spring Boot, PostgreSQL

Language training app (Video Learning service) [🔗](#)

Video-based learning platform supporting online classes and educational content delivery.

- Built backend workflows for class management, content upload, and student enrollment.
- Implemented media processing and video delivery functionality.
- Designed indirect data-access mechanisms to manage interaction with core database components.
- Collaborated on deployment and production setup of the service.

Tech: Django, PostgreSQL, FFmpeg, Docker
